

CHECKLIST OF BBM104 SPRING 2025 PROJECT ASSIGNMENT 4

Test Cases

- Contents of the assets folder must be same as the one provided at Piazza.
- Assets are in assets file in src.
- Open the terminal at your main folder (the folder that your code needs to be compiled and run)
- Run the following commands:
 - `javac -version` (must be resulted same as “`javac 1.8.0_xxx`”)
 - `javac -version: javac 1.8.0_431`
 - `java -version` (must be resulted same as “`java version "1.8.0_xxx"`”)
 - `java -version : java version "1.8.0_431"`
- Compile your code and then run it.
- Show that the game opens without any crash. Your system must also read the assets by itself.
- Game can opens without any crash. System can also read the assets by itself successfully.
- Show that Player movement and shooting works correctly. The player tank should be correctly controlled with the movement buttons and it should fire correctly with the “x” button. Firing should not look erratic(no shooting rapid fire with no wait time). Tank movement should be accompanied by a simple animation of the tank using the images provided.
- The user moves the tank with the arrow keys and fires with the x key. It can also fire while walking and cannot fire consecutively. There is a time limit. The tank creates a walking

CHECKLIST OF BBM104 SPRING 2025 PROJECT ASSIGNMENT 4

animation using the given assets. If the tank is destroyed, it will respawn after a certain period of time in its original position.

- Show that Enemy movement and shooting works correctly. Enemies should move randomly or semi randomly and they should shoot at semi random intervals. Keep in mind that tanks should not move too erratically(constantly changing directions multiple times in a single second) and they should not be able to fire again right after firing. Enemies should spawn correctly.
- The enemy tank moves in random directions and changes its direction randomly at a certain time. But they have no animation. It fires at random intervals and is added to the game at random intervals. They can only be added to the upper part of the map, but they can be added to the into the player tank, then both tanks will explode and if they collide while moving, they both explode. When the enemy tank explodes, a new tank will respawn after a while
- Show that bullets behave correctly. Bullets should hit and destroy the correct type of tanks depending on who fires them. Bullet hit should be accompanied by appropriate explosion image.
- When bullets hit enemy or player's tank, they disappear with a large explosion effect and tanks explode, and when they hit a wall, they disappear with a small explosion effect. Also, the bullets have the same direction as their tanks.
- Show that walls are implemented. Walls should prevent tanks from passing through and cause bullets to disappear. There should be walls surrounding the map and inside the area itself.(You can place them as you wish)
- Tanks cannot pass through walls and bullets disappear with a small explosion effect when they hit a wall.

CHECKLIST OF BBM104 SPRING 2025 PROJECT ASSIGNMENT 4

- Scoring works correctly and lives decrease as necessary.
- Scoring works correctly and lives decrease as necessary.
- Pause menu works correctly. Game can be resumed or closed or restarted
- Pause menu works correctly. Game can be resumed or closed or restarted.
- Game Over triggers correctly and Game Over Menu works correctly. Game can be closed or restarted.
- Game Over triggers correctly and Game Over Menu works correctly. Game can be closed or restarted.

INCOMPLETE PARTS

- There is no movement animation for enemy tanks in my code. They can move without animation.
